Practical Solutions for Protecting America's Wildlife

The conservation of open, healthy landscapes that provide refuge for animals and make migrations possible is an essential part of what we do. As hundreds of species continue to become endangered or extinct, we are working arm-in-arm with our partners to create conservation solutions that address this critical environmental challenge while also benefiting people.

Ranching with a Conservation Mind

Tim Delaney is both a ranch owner and a principal at a heavy construction firm. He set a goal for his Wyoming ranch—to sustainably manage it for both wildlife and recreation, while maintaining a viable livestock operation. Find out how Tim and his family achieved this vision through key conservation partnerships, while preserving habitat for pronghorn, sage grouse, mule deer and more!

Saving a Lifeline for the Red Knot Population

Every spring, thousands of red knot birds converge on the shores of Mispillion Harbor—a one mile stretch of shoreline in the Delaware Bay. Here, 80 percent

of migrating red knots feed and rest during their annual 9,000-mile migration from South America to their Artic breeding grounds. Learn how we protected approximately one mile of the Harbor's critical shoreline for imperiled red knots and other shorebirds species.

Coastal Habitat Protection at Bon Secour National Wildlife Refuge

Thanks to a partnership between the Fund, the U.S. Fish and Wildlife Service, the National Fish & Wildlife Foundation and the State of Alabama, more than 250 acres of sensitive coastal habitat were recently protected and added to the Bon Secour National Wildlife Refuge. The area provides habitat for numerous species, including young adult Kemp's ridley sea turtles, as well as the endangered Alabama beach mouse.
